

PRE-COOLING the air itself before the A/C unit has to cool it off?

2) Could you use blocks of ice hung under the soffits of your house to PRE-COOL the air going up into the attic? (the air going up your soffits is what cools off the attic, for without them an attic would be even HOTTER than it already is).

3) Could you use blocks of ice around the CONDENSER COILS, but the ones that are HOT - the ones going
