Transporter works seamlessly with existing NAS systems and file servers - giving IT full control of their data and users the flexibility and ease to access and share files across their computers and mobile devices. With Transporter, organizations leave their files exactly where they are and sync files with their existing storage solutions. Users get the benefits and simplicity of the cloud with the performance, privacy, security and protection of on-premise NAS - that public cloud providers can't deliver.

In addition to Connected Data's record growth in Q2 2015, the company announced several other significant corporate milestones in the first half of the year, leading the industry with continued innovation and expansion:

- In February, the company added two new additions to the Transporter for Business family—the Transporter 15 and 30 appliances—which combine the modern file management features of public cloud storage services with the visibility and control offered by a network-attached storage (NAS) system from vendors such as NetApp. With Transporter, Transporter 15, Transporter 30, Transporter 75 and Transporter 150, Connected Data now offers a complete range of private cloud file sync and share solutions for businesses of every size.
- In April, the company expanded its executive team and announced two C-level executive appointments to address the growing demand for Transporter private cloud appliances over public cloud and legacy NAS offerings, with Russell Johnson joining as COO and Gene Spies named CFO. These appointments were followed in June by the announcement of storage industry orage nsp Mike Munozeneg asmed CF Connected DTj ET
